Field of the Invention The present invention generally relates to a lamp driving apparatus that converts a DC voltage to an AC voltage in a manner in accordance with a load of a lamp. 2. Description of the Related Art Japanese Laid-Open Patent Application No. 2011-092135 discloses a lamp driving apparatus that detects an internal temperature of a lamp by measuring a resistance value of a heater of the lamp and controls the turning on/off

---

of the lamp in accordance with the detected internal temperature of the lamp. When the lamp is turned on, if the internal temperature of the lamp is high, a duty rate is increased, and the lamp is driven in a continuous lamp mode. On the other hand, if the internal temperature of the lamp is low, a duty rate is decreased, and the lamp is driven in a lamp off mode. However, in the lamp driving apparatus disclosed in Japanese Laid-Open Patent Application No. 2011-092135, it is possible to determine if the internal temperature of the lamp is high or low at the time of determining whether the 3ef4e8ef8d
