1. Field of the Invention The present invention relates generally to the field of computer systems, and more particularly to compilers in computer systems.

2. Background Art Traditionally, compilers are dedicated software tools used to translate a high level programming language, such as C, C++ or Java, into a sequence of low level instructions, such as for the processor in a computer. In recent years, with the proliferation of general purpose computing devices, such as personal computers, the need for a high-level, standardized programming language, which provides a set of services to the user and which is readily usable on these devices has increased. Accordingly, “scripting languages” have been developed. One example of a scripting language is the Java™ programming language. Java™ is a modern, object-oriented, platform independent, high level programming language. Because of its object-oriented approach, Java™ can be used to develop an application with a component-based architecture. Java™ is a product of Sun Microsystems, Inc. Java™ language text and API's are publicly available from Sun Microsystems, Inc. in the java.sun.com web site. Additional information about the Java™ language and runtime environment is also available in a number of references, including Appel et al., Java™ Language and Development Tools, Second Edition, Addison Wesley, 2000; and James Gosling et al., The Java Language Specification, Second Edition, Addison Wesley, 1999. An important attribute of scripting languages is the ability to create applications which have an interactive user interface. With scripting languages, such as Java™, this can be done using the “swing” component of the Java™ API, which is a graphical interface library used for developing user interfaces to applications. The swing library was originally developed by Sun Microsystems, Inc. and is publicly available from Sun Microsystems, Inc. in the java.sun.com web site. Additional information about the swing component is also available in a number of references, including James Gosling, JDK Implementation of the Java Platform, Sun Microsystems, Inc., 1999. Swing
