NeXtract Professional is a powerful data extraction tool that converts accounting reports into Excel spreadsheets, or into PDF reports that can be opened with most applications. It converts all reports into spreadsheets as long as the report is supported by NeXtract. NeXtract Professional has the ability to convert reports to: * Word documents * Excel spreadsheets * PDF documents It converts a variety of reports into: * HTML * XML * Wordperfect The NeXtract Professional application has two key features: * Use the NeXtract Index to select reports and save them to a laser vault, and use a selection to extract data from any report. * Use the NeXtract Editor to create your own extractors and templates. It has many features that make it easier than other tools to extract data from your own reports. You can choose between conversion to spreadsheets or PDF files. You can save reports to a LaserVault to add them to your archive. You can also save to NeXtract Indexes to create reusable data extractors. NeXtract is easy to use. Just select the documents you want to convert and click the Convert button. You can have it extract data directly from a network drive, FTP server or from LaserVault Index. You can also use NeXtract directly from the LaserVault client. You can also modify your templates to easily customize them to your needs. You can use the templates as you wish. You can create your own templates with NeXtract Editor. All the templates are generated in code and you do not need to learn any programming to use them. NeXtract is a very powerful product. It can extract data from any report supported by NeXtract. It converts any format and is very powerful. If you want to learn more about NeXtract, visit our website at: www.nextract.com Recursion allows you to edit the source code and make the application you have written faster, more efficient and more useful. But at times you do not know how to edit the code. In such cases you have to search for such codes on the Web. Searching for files or folders in Recursion can be a very tedious job. Not only you have to search the right folder, but you also have to search every sub-folder as well. This problem can be easily avoided if you know the
