KEYMACRO is a free Windows program designed to capture and edit keyboard macros. It can record and replay sequences of up to 50 keyboard macros. A KeyMacro is a collection of keystrokes that are grouped together into a macro. In some cases, for example in games, macros are a useful way to speed up the actions performed on the keyboard. Some software such as the text editors Write and WordPad allow you to record keystrokes into macros. However, these are basically to be used to speed up the typing of the same action repeatedly. Most keyboards do not have dedicated keystrokes to activate macro commands. Instead, they use keys for other functions, making them unsuitable for creating macros. In KEYMACRO you can create macros that capture combinations of keys on the keyboard, in the form of macros that the program can play back. When a macro is played back, it behaves exactly as it was recorded, for example, it will repeat the keystrokes. Features: Full keyboard support The program can support both 101- and 105-key keyboards. If you use a 104-key keyboard, KEYMACRO will learn the additional combinations. Assign macros to programs You can create a macro to perform a specific action in one program, and a different macro to perform the same action in a different program. Use KeyStrokes When you are recording a macro, you can assign a keystroke or a combination of keystrokes that will be triggered when the macro is played back. Assign macros to menus You can assign a macro to a menu item that will be activated when the item is selected. This macro will perform an action when the menu is activated. Auto-replay When a macro is played back, it will be recorded again and again, playing back the entire sequence of keystrokes that were recorded. When there are multiple macros, this can result in the app playing back the same macro multiple times. To avoid this, you can choose to only replay the selected macros when the menu is activated. Record to FMP You can save the recorded macros to a FLT file, and then replay them using a Windows Media Player playlist. You can also save them to other formats such as a WinAmp playlist, which is more compatible with other programs. Keyboard setting You can set the auto-repeat rate and the time limit to playback. You can also set the recording mode for the record window (always on, 77a5ca646e

There are a lot of political pundits talking about how Mississippi is a heavily Republican state. But it is not. In fact, for the last 20 years, Mississippi has been a blue state. It's one of the most solidly Democratic states in the country. But Mississippi is also a state with a surprisingly complicated voting system. Here's how it works: The state requires two things to vote in the Democratic presidential primary. You must be a registered Democrat and you must show up with a piece of paper saying you voted in the Democratic primary. The main point of this rule is to protect against voter fraud, by requiring a voter to show that he is indeed a registered Democrat. Yet critics say the law is written in a way that discourages minorities, students and people in the wrong part of the state from voting. Citizenship Mississippi is one of two states that, along with Kansas, does not recognize U.S. citizenship for people born in its state. This means that people who are not born in the state can't vote, even if they are registered Democrats. It's not illegal to be a registered Democrat, but they are allowed to vote in the primary only if they are a resident of the state. For someone who doesn't live there but has a driver's license or is registered to vote, it's as if they didn't vote at all. Voting In A Specific Part Of The State It's possible to vote in the Democratic primary without being a registered Democrat. If you want to vote in the primary, you need to vote in a
