Quickly change or add file, folder and application EXIF Timestamps. Keywords: Time stamps, EXIF, changing, timeTuesday, June 24, 2013 My name is Anton I've been using GIS since 1995 (10 years) and over that period I've used a wide range of GIS products. I've been an IBMer since 1985 and have used many a product that came out of IBM. So I understand, like most users, what matters to me and what is not important. EOS (Environmental OS) was the first GIS that I used and I've been using it ever since. If you are new to GIS, my advice is this. Buy a cheap "starter kit" then spend the next few years buying software that supports the product you use. Over the years I've had various versions of EOS but I keep going back to the original EOS 3.3.10, the last version of EOS that IBM have produced in the GIS range. I've used pretty much every version of EOS but the important thing to me is that it works. It will never go into obsolescence. It will continue to work, and it will do so for me for the foreseeable future. With the last version of EOS I began writing my first book "The Complete Guide to GIS". This has been a very hard project to complete. I've done tons of work in GIS but never have I worked on a book. I've always read books and spoken about GIS rather than writing my own, but when I realised that I had to write my own book to complete it I decided to do it properly. I got the draft out on 21st December 2011. It was more or less finished on 6th September 2012. I've been writing, typing, researching, retyping and editing ever since. The book went into production and I've had a few delays in the release date. But I'm finally here. The first copies are now available to the public. The Book Now, if you've followed my blog over the years, I can tell you you'll be pleased with the book. I have spent months, in some cases years, researching and writing it. It contains more than 4000 words 77a5ca646e
