Drawer Namespace: A new namespace called Drawer with Drawer Name Extension allows you to assign a name to each of your drawings in the Drawer. You can rename the Drawer with the assignment of a drawer name for each Drawing that you make. When you create or open an.rxd file, the file automatically assigns the name to the folder. You can also use this feature to create your own custom template library. You can assign a name to all the drawings in a template. When the user opens a.rxd file, it creates a new folder and opens the drawing, the new folder name is then used as the name of the new drawing. (video: 3:15 min.)

MasterDraw: The tool of the future, your MasterDraw. Create a template with a drawing and make edits to the template in a simplified way, while editing the drawing directly. Take advantage of our next-generation refactoring technology, which allows you to detect changes to the drawing without having to reparse. You can be sure that all drawings in the template will be updated. With MasterDraw, you can work directly with the drawing and directly make changes to the drawing. Your changes are detected and in turn, are applied to all the drawings in the template. (video: 4:35 min.)

Parameter Editor: The Editor with Parameter Control provides drag-and-drop editing of drawings that support parametric constraints. Add, delete and modify parameter constraints, without leaving the drawing. Control the updated results by selecting, inserting, deleting, and rearranging parametric constraints in the drawing (video: 1:42 min.)
