To create an empty drawing: Open the.DWG file that you want to make a drawing of file that you want to make a drawing of Click File > New > Drawing > Blank A new blank drawing opens. For example, a drawing set named "Ship" would include the drawings: Ship.dwg, Ship$Arch.dwg, and Ship$Pilot.dwg. The AutoCAD manual explains drawing sets and how to change the order in which drawings are added. Enter drawing commands To enter drawing commands, enter them in the command line. You can do this by pressing the Enter key or by clicking the Enter key on the keyboard or clicking the drawing command in the command line on the drawing area. AutoCAD does not automatically assume that the same command will be entered from the command line as it would in a command window. For example, if you double-click a drawing command in the drawing area, the
