PlexTurbo is designed specifically for the PLEXTOR SSD series.

PLEXTOR is one of the few SSD brands that has adopted the BSI standard for mechanical hard disk drives and SSDs. This means that PLEXTOR SSDs use either the M.2 or PCIe SSD interface. M.2 SSDs are readily available, while PCIe SSDs are a little more difficult to find.

PLEXTOR SSDs use the M.2 interface, so they can be used with any available M.2 slot. Features: - PlexTurbo is an easy-to-use and user-friendly application that enhances the performance of your PLEXTOR SSD with smart caching and advanced protection from loss of data. - PlexTurbo offers two main modes of operation: - off (default) mode: PlexTurbo remains offline during use. - on mode: PlexTurbo acts as a virtual hard drive that resides in the PC's RAM (memory). - PlexTurbo works with all operating systems that support the creation of a RAM disk. - PlexTurbo provides a view of all the PLEXTOR SSDs that are running on the computer. PlexTurbo displays the

total cache capacity of the drives, the total volume of reduced write cache write operations, and the maximum cache size that will be used.

PlexTurbo also shows the last successful write operation and the amount of data that was written. - PlexTurbo can preload files that are used by the operating system during the next boot. This is useful for quick boot times. - PlexTurbo has two parameters to be set: the maximum cache size and the number of preloaded files. - PlexTurbo works with multiple drives that use smart caching technology. To improve performance, PlexTurbo can automatically manage the balance between the drives. - PlexTurbo

offers offline operation, and can act as a virtual RAM drive. - PlexTurbo can be used with any M.2 SSD. - PlexTurbo's features can be configured using the 'Advanced Settings' window. - PlexTurbo is compatible with any Windows operating system and requires Windows 7, Windows 8, or Windows 8.1. Retail I have no idea why you'd want this, but if it sounds good to you, then go ahead and download it. Otherwise, there are plenty of other apps that do the same thing. @Radir I want this because
